SFT_HISTORY	History of search queries (which order codes were searched for and when) for the "Recent search list" function	-	Not a cookie, but local storage.
<b>Additional cookies when order code search is used (Order Code Interpreter)</b>			
JSESSIONID	Identification of the session on the server. Load balancing (a user session is always routed to the same server).	Until the browser session ends	Session cookie

## Types of cookies

### 1. Session cookies

While you are active on a website, a session cookie holding a session ID is temporarily stored in your computer's memory, for example, to prevent you from having to log on again each time you change pages. Session cookies are deleted when you log off or become invalid as soon as your session expires automatically.

### 2. Persistent or protocol cookies

A persistent or protocol cookie stores a file on your computer for the period of time specified in the expiration date. These cookies allow websites to recall your information and settings when you next visit. This results in faster and more convenient access, e.g. you do not have to change your language settings for our portal again. Once the expiry date has passed, the cookie is automatically deleted if you visit the website which generated it.

### 3. First-party cookies

First-party cookies originate from the operator of the website.

### 4. Third-party cookies

Third-party cookies originate from providers other than the website operator. For example, they may be used to collect information for advertising, user-defined content and web statistics.
